

Good day. I hope this letter finds you well. I am writing to you regarding osc notice 11-798 that relates to the short selling resolution. As an individual investor and a small business owner in Ontario, Canada, I would like to write to you in hopes that my voice can be heard.

I would like to comment on the destructive ways that short selling and naked short selling of financial securities have been plaguing the industry. I believe the Canadian system should not duplicate the system that has been set up in the United States where institutional short sellers and hedge funds can attack and tear a company apart for their own financial gains. These financial terrorists should not be able to short a company and FTD(Fail To Deliver) their positions and never close or pay when they lose.

We can't have a system that socializes losses and privatizes gains as this would lead to millions of investors pulling their money from the current system. We need more transparency and accountability. These financial terrorists are happy to make risky bets with our pension money but will never make the same bets with their own finances.

Please keep our financial system transparent and accountable.

Thanks,

Long Time Investor
