Material Change Report

In its press release dated November 1, 2019, the Company announced adjusted 2019 production and guidance, which set out, among other things, that the lower than planned production rates were due to issues around mine development and stope availability. While this information was broadly disseminated to the market via press release on November 1, 2019, the Company subsequently filed a material change report on SEDAR on December 5, 2019 with respect to the adjusted 2019 production and guidance in response to an Ontario Securities Commission continuous disclosure review.
